

John C. Morrow  
Lieutenant Colonel, U.S. Army  
District Engineer  
US Army Corps of Engineers  
1455 Market Street  
San Francisco, CA 94103-1398

Subject: Records related to the Redwood City "Saltworks"

Dear LTC Morrow:

I appreciate your conversation today with Jane Diamond regarding your District's readiness to share the Corps files concerning Redwood City, CA location known as the "Saltworks" (the Site). I understand your office will arrange for EPA to review the District's official records and obtain copies of documents in the District's files that may not already be in our possession.

My staff will contact Jane Hicks or Mary Goodenough to arrange a visit to the Corps offices to perform this review and select documents to be copied the week of April 20<sup>th</sup>. To the extent the Corps' complete record may require additional time to compile, we would like to review available documents next week, with subsequent reviews to follow soon thereafter. The priority documents we would like to obtain include:

1. Technical documents and Corps field records pertaining to: elevations (including Mean High and/or Ordinary High Water indicators), such as the District's engineering report and task lists and Statements of Work associated with the engineering report; USGS T-sheets and tidal data; wetlands, soils and/or vegetation field surveys or reports; and faunal use of the Site.
2. Past and current permits, permit applications, and project proposals for the Site, including all supporting documents.
3. Any documents relating to past, present or future commercial activities or uses of the Site, including but not limited to use of the Site in commercial salt production.

EPA's points of contact are Melissa Scianni at (415) 972-3821 and Rich Campbell at (415) 972-3870. Thank you for helping facilitate EPA's completion of the jurisdictional determination.

Sincerely,

Jared Blumenfeld
